Inuktut – Nattilik keyboard map for macOS
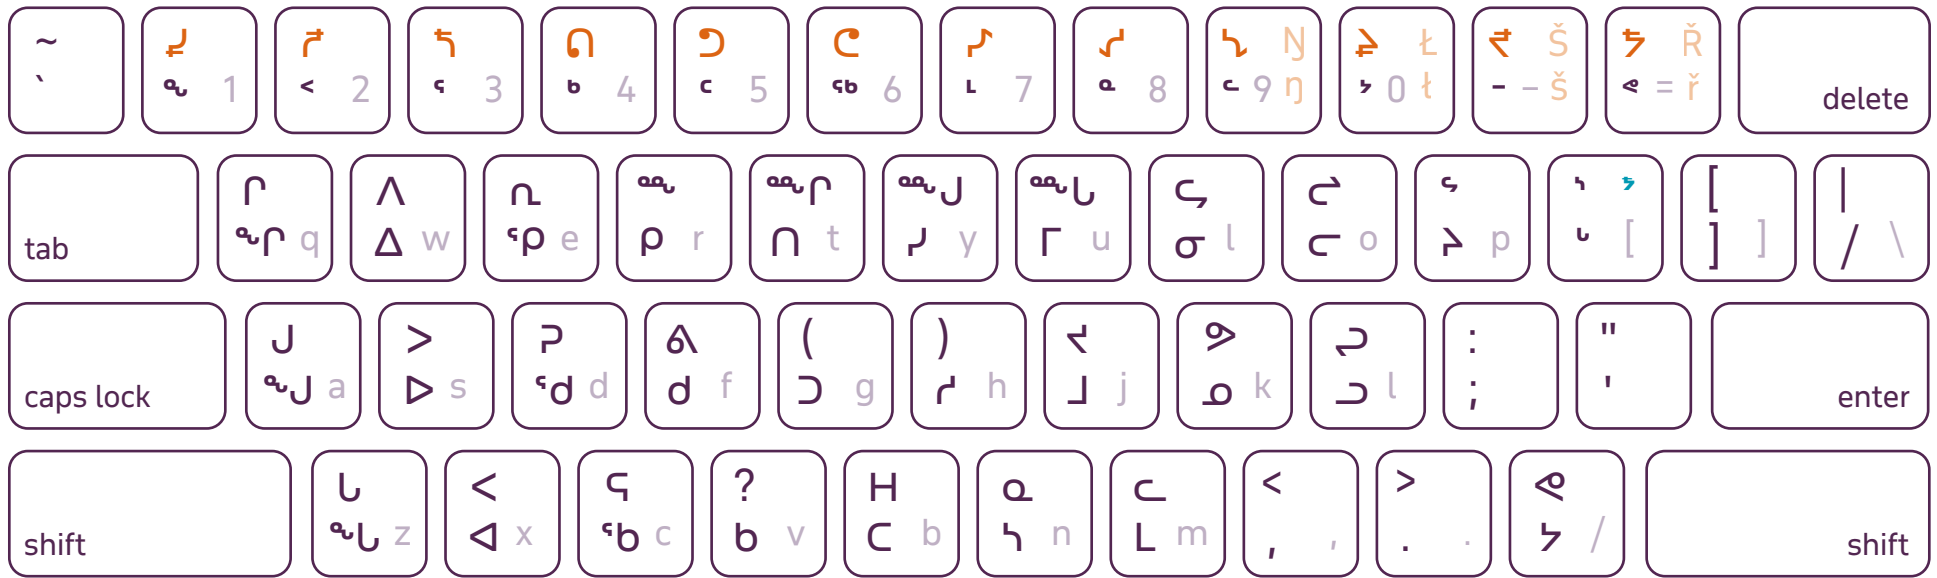

The following keyboard layout map for Nattilik Syllabics, below, has been extended from the current "Inuktitut – Nunavut" keyboard layout currently on the macOS. All keys remain the same between both with the exception of the Nattilik characters.

LEGEND

- ■ **Nattilik syllabic characters** = caps lock off + shift
- ■ **Nattilik ' final character** = caps lock off + option
- ■ **Roman keyboard**
  lowercase = caps lock on
  uppercase = caps lock on + shift
- ■ **Nattilik roman lowercase letter** = caps lock on + option
  Nattilik roman capital letter = caps lock on + shift + option
- → **Long vowel syllabics (dot above; ᒡ ᐃ᷄ ᓅ ᓅ)**
  lower syllabic = caps lock off + option
  upper syllabic = caps lock off + shift + option (including Nattilik characters)

KEYBOARD VIEWER

An interactive keyboard viewer can be accessed on your Apple computer in order to view this keyboard layout while typing. This can help with accessing and learning the new key positions of the Nattilik special characters.

The macOS system keyboard viewer can be accessed by following these steps:

- → Click on the **Apple** icon in the upper left corner of the menu bar.
- → Select **System Preferences** and click on the **Keyboard** option or icon.
- → Check on the box **Show Keyboard, Emoji, & Symbol Viewers** in menu bar.
- → From the **ABC** or **Inuktut - Nattilik** icon in the top right area of the menu bar on your desktop, select the **Show Keyboard Viewer** menu option. This will call up the Keyboard Viewer on your screen, which you can position anywhere on your screen that you wish.
